Deadline for manuscript
submissions:
closed (31 August 2022)

Message from the Guest Editors

As one of the basic objectives in water resource management, rivers and lakes are important components of surface water, being the ecological and environmental guarantees for regional sustainable development. Among ecosystems on the Earth, however, rivers and lakes are one of them that are most intensively influenced by human activities, and the intensity is becoming stronger. A healthy river and lake system is essential for maintaining the structure and function of ecosystems and serving human society. Practice to improve the health of rivers and lakes has been around the world for decades, but the specific techniques and measures of ecological restoration still face challenges.

This Special Issue seeks research papers of the latest research findings from worldwide scientists on various aspects of “River and Lake Health Improvement and Ecological Restoration”. Especially, we encourage submission of interdisciplinary work and multi-country collaborative research. We also encourage submission of environment policy or water policy-related manuscripts that focus on river and lake health improvement and ecological restoration associated issues.

Message from the Editor-in-Chief

Addressing the environmental and public health challenges requires engagement and collaboration among clinicians and public health researchers. Discovery and advances in this research field play a critical role in providing a scientific basis for decision-making toward control and prevention of human diseases, especially the illnesses that are induced from environmental exposure to health hazards. *IJERPH* provides a forum for discussion of discoveries and knowledge in these multidisciplinary fields. Please consider publishing your research in this high quality, peer-reviewed, open access journal.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, MEDLINE, PMC, Embase, GEOBASE, CAPus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (*Public Health, Environmental and Occupational Health*)
