Deadline for manuscript
submissions:

30 May 2024

Message from the Guest Editor

Dear Colleagues,

Glycosylation, a modification that occurs on amino acids, is a highly prevalent post-translational modification in cells. Glycosylation plays important biological functions, particularly in glycoproteins on the cell membrane, such as the immunoglobulin superfamily and integrin receptors, which are responsible for cell signaling and communication. Mass spectrometry is a high-throughput technique that can be used to identify glycoproteins and can even achieve site-specific glycan structures. Characterizing glycoproteins in biological samples using high-throughput approaches, including subsequent biochemical validation, is a cutting-edge direction for deciphering the biological functions of site-specific glycosylation.

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
