submissions:

**closed (31 January 2023)**

### Message from the Guest Editor

Dear Colleagues,

LPS is a complex glycolipid comprised of a hydrophobic membrane-anchored lipid A and a core oligosaccharide, which is linked to O-antigen in smooth-type bacteria. The lipid A part constitutes the endotoxin principal and is highly conserved. LPSs are potent activators of the mammalian immune system. LPS composition is highly heterogenous, and this heterogeneity arises due to the incorporation of non-stoichiometric modifications, alterations in acyl chain length which contribute to antibiotic resistance, and evasion of host immune system. Recent studies have unraveled novel essential components in the regulation of a tight balance between LPS and phospholipid content, and discovery of new information on the LPS transport to the OM. Regulated assembly of LPS, structural diversity, new LPS structures, LPS transport, and recognition of LPS by host immune system will be the focus of this issue.

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
