Message from the Guest Editor

Abiotic stress leads to abnormalities in cellular homeostasis which have detrimental effects on growth and development. Being sessile organisms, plant abiotic stress signaling is a key element to better understanding plant acclimation and adaptation to environmental fluctuations. Autophagy; non coding small RNAs, such as microRNAs; and Long non coding RNAs (LncRNAs), considered as the mechanism in plants, have been associated with plant abiotic stress responses and are known to have novel roles in stress signaling and gene networks. Hence, in this Special Issue, these major elements of abiotic stress signaling will also be covered and addressed along with the pathway and, in the light of recent discoveries, a putative, state-of-art role.

"Abiotic Stress and Gene Networks in Plants" will address the underlying molecular mechanisms of a wide range of abiotic stress, including micronutrient deficiencies, using tools and technologies available.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
