### Message from the Guest Editor

Dear Colleagues,

In recent years, numerous studies have confirmed the prominent role of primary hyperaldosteronism (PA), due to its high frequency among secondary forms of arterial hypertension and to specific deleterious effects on global cardiovascular risk; numerous studies have also evaluated how the excess of aldosterone directly causes important changes in the heart, vascular system, and metabolic balance, favoring arrhythmias, cardiac remodeling, metabolic alterations, increased oxidative stress, and thrombosis.

The purpose of this Special Issue is to highlight the direct role of excess aldosterone in the determination of higher global cardiovascular risk.

Dr. Luigi Petramala

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
