### Message from the Guest Editor

Dear Colleagues,

Tryptophan is a rate-limiting essential amino acid and thus a building block of life. Tryptophan administration can increase brain serotonin synthesis and release. This, in turn, can improve mood and sleep. Tryptophan is also the precursor of melatonin, neuroactive kynurenines, and niacin. Current research on the physiology and pathophysiology of tryptophan metabolism has revealed the central role of tryptophan and its metabolites as master molecular regulators of neurotransmission and neuromodulation. Tryptophan metabolites such as melatonin and structurally related microbial agents act as potent antioxidant and bioenergetic agents. This Special Issue will examine the key tryptophan pathways and their molecular targets. The latest developments in tryptophan research are the focus of this article collection, and the studies herein will demonstrate the relevance of tryptophan and its metabolites in nutrition and health. The discovery of a broad range of bioactive compounds derived from tryptophan will enable a better understanding of the unique role of this amino acid in disease prevention and treatment.

## Message from the Editor-in-Chief

The International Journal of Molecular Sciences (*IJMS*, ISSN 1422-0067) is an open access journal, which was established in 2000. The journal aims to provide a forum for scholarly research on a range of topics, including biochemistry, molecular and cell biology, molecular biophysics, molecular medicine, and all aspects of molecular research in chemistry. *IJMS* publishes both original research and review articles, and regularly publishes special issues to highlight advances at the cutting edge of research. We invite you to read recent articles published in *IJMS* and consider publishing your next paper with us.

## Author Benefits

**Open Access:**— free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, MEDLINE, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (*Biochemistry & Molecular Biology*) / CiteScore - Q1 (*Inorganic Chemistry*)
