Deadline for manuscript  
submissions:

**closed (31 August 2023)**

### Message from the Guest Editor

With the development and progress of biomedical imaging technology, biomedical image processing has become more and more widely used in biomedical research and clinical medicine. Additionally, computer vision has recently revolutionized the methods used for biomedical image processing due to automated feature discovery and the superior results that can be obtained. The aim of this Special Issue is to collect both review articles and original research papers describing novel methods and applications of biological and medical image processing, with special emphasis on efforts related to the applications of computer vision problems. Typical biomedical image datasets include and are not limited to magnetic resonance, ultrasound, computed tomography, X-ray, optical and confocal microscopy, and video and range data images.

an Open Access Journal by MDPI

## Editor-in-Chief

## Message from the Editor-in-Chief

The concept of *Information* is to disseminate scientific results achieved via experiments and theoretical results in depth. It is very important to enable researchers and practitioners to learn new technology and findings that enable development in the applied field.

*Information* is an online open access journal of information science and technology, data, knowledge and communication. It publishes reviews, regular research papers and short communications. We invite high quality work, and our review and publication processing is very efficient.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [ESCI \(Web of Science\)](#), [Ei Compindex](#), [dblp](#), and [other databases](#).

**Journal Rank:** [CiteScore - Q2](#) (*Information Systems*)
