

Dear Colleagues,

On behalf of the Evaluation Committee, I am pleased to announce the winner of the 2017 *Inorganics* Travel Award. This award was granted to **Daniel Franz**, a postdoc researcher in Professor Shigeyoshi Inoue's group at the Technical University of Munich.

Dr. Franz's research interests focus on the isolation of low-coordinate and electron deficient main group metal complexes, as well as molecular higher-coordinate metal hydrides. He is planning to present his work "Coordination chemistry and applications of N-heterocyclic imino complexes of boron and silicon" at the International Conference on Phosphorus, Boron and Silicon—PBSI 2017. The award consists of **800 Swiss Francs** towards attending this conference.

The final decision was extremely difficult to make given the extraordinary number of high quality applications that were received. We would particularly like to thank all the applicants for their submissions and congratulate Dr. Franz on his success.

Prof. Dr. Duncan H. Gregory,
Editor-in-Chief

2017 TRAVEL AWARD WINNER

Inorganics (ISSN 2304-6740) is an open access journal of inorganic chemistry, organometallic chemistry and bioinorganic chemistry, published quarterly online by MDPI. Please find more information on homepage:
<http://www.mdpi.com/journal/inorganics>

The competition for 2018 *Inorganics* Travel Award will be opened in **November 2017**. Please check the homepage above for more information closer to this date.
