Deadline for manuscript  
submissions:

**closed (20 March 2024)**

### Message from the Guest Editors

Low-temperature fuel cells with a proton-exchange membrane are an important part of the rapidly developing field of hydrogen energy. Electrocatalysts are key components of such electrochemical devices. The best catalysts for polymer membrane fuel cells are platinum and its alloys when used on an electron-conducting carbon support. The use of alloying components of various natures, in combination with the formation of a wide range of complex structural types of Pt–M nanoparticles (solid solutions, intermetallic compounds, core–shell, gradient NPs, nano-frames, etc.), make it possible to significantly increase the activity, selectivity, and stability of catalysts in electrochemical reactions and ). This Special Issue will provide information on new advanced Pt–M and PMG-free catalysts that are promising for use in PEMFC. We welcome papers devoted to the development of new methods of synthesis and the search for new architectural types of nanoparticles with high catalytic activity, the study of the mechanism of reactions occurring on such catalysts, the analysis of the mechanisms of catalyst degradation, and the search for ways to increase their durability.

## Message from the Editor-in-Chief

Inorganic chemistry remains a lynchpin of modern chemistry, not only embracing the function and reactivity of combinations of most elements of the periodic table, but also providing a footing for studies of materials, catalysts, drugs, fuels and industrial chemicals. Arguably, the role and reach of inorganics in society have never been as great as today. Adventurous research at the heart and at the extremes of inorganic chemistry is vital to further advances and *Inorganics* offers authors the opportunity to publish exciting new research in an open access format.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q2 (*Chemistry, Inorganic & Nuclear*) / CiteScore - Q2 (*Inorganic Chemistry*)
