Deadline for manuscript
submissions:

30 September 2024

Message from the Guest Editor

Fuel cells and water electrolysis are both important technologies that have the potential to significantly impact the energy sector and help address environmental challenges. Fuel cells are devices that convert chemical energy into electrical energy through the electrochemical reaction process. They have several advantages over traditional energy sources. Membrane electrode assemblies (MEAs) play a crucial role in both proton exchange membrane (PEM) fuel cells and water electrolysis cells as they serve as the heart of these devices. The performance and durability of PEM fuel cells and water electrolysis cells depend largely on the quality and performance of the MEA.

This Special Issue invites research articles and review papers that deal with: innovative strategies to engineer catalyst layers and gas distribution layers; catalyst ink formulation; and novel strategies to enhance MEA performance in PEM and AEM fuel cells and electrolyser cells.

Message from the Editorial Board

The unique journal *Inventions* is different from all other journals. Many scholars spend their lives publishing research papers in many different journals, but most of these journals do not help scholars collate and analyze their results or assist in promoting them to a relevant industry. However, *Inventions* will help authors not only to publish their papers in the journal, but also to promote their research results to industry and assist them in realizing the purpose of technology transfer. In the future, *Inventions* will help authors to evaluate their technology license fees based on the valuation theory and approaches and also help authors to show their patents and technologies on a network transaction platform.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Inspec, and other databases.

Journal Rank: CiteScore - Q1 (*General Engineering*)
