Message from the Guest Editors

Dear Colleagues,

In this Special Issue, we will emphasize some of the recent research and review articles that highlight the epidemiology and risk of cardiovascular disease. Advances in epidemiology, such as the opportunities to extract data from registers and follow large population samples, make it easier to write epidemiological papers of high quality. Further, new methods in cardiovascular medicine create new opportunities for earlier detection and, thus, the prevention and treatment of cardiovascular disease, an important worldwide contributor to human mortality. In this Special Issue, “Epidemiology and Risk of Cardiovascular Disease”, we welcome you to contribute reports from ongoing trials, or a research paper or review article on any aspect of this topic, including novel basic science or clinical approaches that better define the epidemiology and risk of cardiovascular disease. This is an excellent opportunity for epidemiological, clinical, occupational, and basic science trainees in your group to contribute to this field.

Dr. Marit Skogstad
