### Message from the Guest Editors

Dear Colleagues,

Dyslipidemia is known to promote atherosclerosis. It is a complex disease and is a major risk factor for adverse cardiovascular events. High levels of low-density lipoprotein cholesterol (LDL-C) and low levels of high-density lipoprotein cholesterol (HDL-C) are associated with myocardial infarction (MI) and stroke. Dyslipidemia is an established risk factor for cardiovascular disease (CVD).

This kind of disease dramatically affects our life and health. Thus, this Special Issue is incredibly topical and important, and we look forward to receiving your submissions.
