Message from the Guest Editors

Medical practice is moving toward precision medicine, and surgery could be considered the standard of care in colorectal disease treatment. In this setting, evidence has been accumulated to consider minimally invasive surgery as the gold standard treatment. In the new era of minimally invasive surgery, some technological advances have revolutionized surgical strategies, improving intraoperative and postoperative results. Above all, robotic surgery, near-infrared technology, 3D reconstruction, and Artificial Intelligence play a fundamental role in the treatment of surgical colorectal disease.

The aim of this Special Issue is to assess the role of the above-mentioned new technologies on colorectal surgery results.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPUS / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Medicine, General & Internal*) / CiteScore - Q1 (*General Medicine*)
