Message from the Guest Editor

Keratoconus is a progressive, frequently asymmetric, inflammatory corneal thinning disorder characterized by changes in the structure and organization of corneal collagen. Accurate corneal imaging is now highly desirable for diagnosing keratoconus. Modern anterior segment imaging techniques, such as Scheimpflug photography and optical coherence tomography, have significantly improved our ability to identify keratoconus. As for keratoconus treatments, corneal cross-linking (CXL) was first introduced as a promising technique to slow or stop disease progression. There have been various modifications to standard CXL, such as increasing the intensity of ultraviolet-A irradiation and shortening the exposure time without altering the total energy delivered. Another modification has been to perform CXL through an intact epithelium with less discomfort to the patient and reduced postoperative complications. This Special Issue will feature articles on the recent developments in keratoconus. We invite researchers to submit original research and review articles on cutting-edge technologies that will contribute to the diagnosis and management of keratoconus.

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Medicine, General & Internal*) / CiteScore - Q1 (*General Medicine*)
