submissions:

31 August 2024

Message from the Guest Editors

Fatigue strength and crack-propagation resistance are essential material properties for designing, optimizing, and managing the structural integrity of AM components. The major concern in the fatigue-life description of AM materials is the large degree of scatter in fatigue life and fatigue limit under similar loading conditions, mostly due to the presence of many process-induced defects and various kinds of heterogeneity (e.g., microstructure and residual stress). The development of robust and accurate models of damage formation, damage accumulation, and failure in AM materials demands accurate characterization of material's response to combined effects of factors such as loading type, loading rate, and environmental conditions.

Research topics of interest include:

- Structural integrity assessments of AM components;
- Multi-scale, physics-based fatigue modeling;
- Computational fracture mechanics;
- Fatigue and fracture of advanced AM materials;
- Thermal–mechanical fatigue of AM materials;
- Environmentally assisted crack growth;
- Residual stress effects on fatigue and fracture;
- Very high cycle fatigue (VHCF) of AM materials;
- Multiaxial fatigue of AM materials.

Message from the Editor-in-Chief

Journal of Manufacturing and Materials Processing (JMMP) (ISSN 2504-4494) is a new MDPI peer-reviewed, open access venue with a focus on the scientific fundamentals and engineering methodologies of manufacturing and materials processing. We offer an online platform facilitating effective exchange of innovative scientific and engineering ideas and the dissemination of recent, original, and significant research and developmental findings. On behalf of the Editorial Board, I extend an invitation to our scientific and engineering colleagues to contribute high-quality, innovative, and ground-breaking research articles to *JMMP*.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **ESCI (Web of Science)**, **Inspec**, **CAPlus / SciFinder**, and **other databases**.

Journal Rank: CiteScore - Q1 (*Mechanical Engineering*)
