Message from the Guest Editor

The effects of fungal pathogens in trees are expected to be stronger and more widespread in the future. Fungal pathogens can affect the whole tree: canopy, leaves, trunks, branches, and roots, and their effects may vary from mild to devastating. We need information on different aspects of tree pathogens to understand their life cycles and to consider potential ways to mitigate their harmful effects on trees. The aim of this Special Issue is to provide space for original and review papers from all research areas of tree diseases induced by fungi, including tree disease resistance and susceptibility, the epidemiology and control of fungal pathogens, and fungal pathogenesis. Papers utilizing traditional methods and/or novel molecular methods are welcome.

Keywords:

- fungal pathogens
- tree–fungal interactions
- fungal diseases in trees
- resistance of trees
- control of fungal pathogens

Message from the Editor-in-Chief

The *Journal of Fungi* (JoF, ISSN 2309-608X) is an international, peer-reviewed, scientific, open access journal that provides an advanced forum for studies related to pathogenic fungi, fungal biology, and all other aspects of fungal research. Research articles, reviews and other contents are released on the Internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mycology*) / CiteScore - Q1 (*Ecology, Evolution, Behavior and Systematics*)
