Deadline for manuscript
submissions:

29 December 2024

Message from the Guest Editors

This Special Issue is a curated compilation dedicated to exploring the intricate relationships between pollutants and ecosystems. It aims to shed light on the multifaceted impact of contaminants on organisms while emphasizing innovative approaches and emerging trends in this critical field of study.

This Special Issue seeks to consolidate the latest advancements and diverse perspectives within the field of ecotoxicology. It aims to foster a comprehensive understanding of the complex interplay between pollutants and ecological systems, providing a platform for sharing groundbreaking research, methodologies, and insightful analyses.

The suggested themes include, but are not limited to, the following:

1. Emerging contaminants: Exploring the impacts of new pollutants on organisms.
2. Multi-trophic effects: Understanding contaminant effects across different levels of the food chain.
3. Adaptive strategies: Examining the resilience of species to environmental stressors.
4. Methodological innovations: Showcasing novel approaches for assessing ecotoxicological risks.
5. Ecosystem resilience: Investigating mechanisms for ecological recovery from contaminant exposure.
