Message from the Guest Editor

The prevalence of asthma and allergic diseases has risen steadily over the past decades and, despite a large increase in knowledge about disease mechanisms and therapeutic targets of these diseases, there are still gaps in our understanding.

This Special Issue of the *Journal of Personalized Medicine* aims to highlight the current challenges of and advances in mechanisms of disease, the diagnosis and treatment of asthma and broader care for allergic diseases. We principally invite papers that are focused on the field of asthma and allergic diseases in general and have potential to be useful for the diagnosis and treatment of these conditions. We encourage the submission of reviews and original articles which describe a personalized medicine approach to the diagnosis, classification, and treatment of these diseases.
