Message from the Guest Editors

Dear Colleagues,

Brachytherapy (or interventional radiotherapy) is a well-established radiotherapy technique with a long history of experience and successful applications. In recent years, there have been a lot of innovations in radiotherapy which included the introduction of hybrid machines, IGRT techniques, and high-technology improvements to treat tumors with a very high accuracy, limiting the doses to the healthy tissues.

This Special Issue of the *Journal of Personalized Medicine* focuses on the current state of interventional radiotherapy with particular attention to the clinical practice and the latest findings in the field. It will be an outlook to the innovations of brachytherapy to focus on the features mostly required in present and future clinical practice. This issue invites leading professionals in the field to share, discuss, and integrate clinical practice solutions.

Therefore, we are particularly soliciting papers that feature the most exciting advances in the field of brachytherapy in clinical practice.

Message from the Editor-in-Chief

Journal of Personalized Medicine (JPM; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, ‘omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

Journal Rank: JCR - Q2 (*Medicine, General & Internal*) CiteScore - Q2 (*Medicine (miscellaneous)*)
