### Message from the Guest Editors

In this special issue, we invite the Authors of the papers that address issues linking spatial planning, spatial and economic effects of spatial policies and their externalities. Submitted articles may focus on a single issue but also cover several issues. We accept methodological, cognitive and conceptual-theoretical papers devoted to local as well as regional problems.

We particularly welcome the submission of studies combining the issues of spatial management, urban and regional planning, and other fields related to space organisation, conservation and protection, aiming to reduce spatial chaos and create development visions for improving spatial structures. Considering externalities and spatial externalities, we expect studies that include aspects of measuring the effects of spatial development.
