### **Message from the Guest Editors**

This second volume of this Special Issue follows on from the success of the first, we invite you to publish your research in this edition of “COVID-19 Prevention and Treatment”

([https://www.mdpi.com/journal/life/special\\_issues/COVID\\_19\\_pre](https://www.mdpi.com/journal/life/special_issues/COVID_19_pre))

What started as a cluster of patients with a mysterious respiratory illness in December 2019 was later identified as COVID-19. All our interventions have focused on cutting lines of viral transmission to control the spread of the pathogen. However, what we have learned thus far tells us that the story of COVID-19 is not so simple. COVID-19 is not a pandemic; it is a syndemic. This indicates that a wider approach is needed to protect the health of our communities. This Special Issue arises from the need for a new approach both in the clinical setting and in therapeutic regimens developed through the exchange of results from clinical and preclinical studies on COVID-19.

Original research articles, and reviews on various aspects of COVID-19 are welcome. With this Special Issue, we aim to create an interdisciplinary consensus from a new perspective.
