Message from the Guest Editor

Dear Colleagues,

Induction motors are the most prevalent element across the industrial sector, being key to all kinds of processes. Although they are known to be robust and resistant element, the stresses to which they are subjected can nevertheless lead to failures.

These failures involve important costs for the industries, necessitating their detection early on, as well as their correct identification. Therefore, the study and control of induction motor failures is a subject of vital interest.

This Special Issue focuses on the control of these faults, applied specifically to induction motors. Innovative papers that delve deeper into this study are therefore welcome.

Message from the Editor-in-Chief

Machines is an international, peer reviewed journal on machinery and engineering. It publishes research articles, reviews and communications.

Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. Full experimental and/or methodical details must be provided.

There are, in addition, unique features of this journal: Manuscripts regarding research proposals and research ideas will be particularly welcomed; Electronic files or software regarding the full details of the calculation and experimental procedure - if unable to be published in a normal way can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within *Scopus*, *SCIE (Web of Science)*, *Inspec*, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Mechanical*)
