

## Sustainability of Building Materials and Civil Engineering Materials

Guest Editors:

**Prof. Dr. Pedro Muñoz-Velasco**

Escuela Superior de Ingeniería y Tecnología (ESIT), Universidad Internacional de La Rioja, 26006 Logroño, Spain

**Dr. Viviana C. Letelier Gonzalez**

Facultad de Ingeniería y Ciencia, Universidad de La Frontera, 478000 Temuco, Chile

Deadline for manuscript submissions:

**closed (30 July 2023)**

### Message from the Guest Editors

The construction and building industry are one of the world economy's largest sectors, but also one of the largest contributors to environmental disruption and pollution. Therefore, the sector must shift towards sustainable. Firstly, the embedded footprint of the building and civil engineering materials encompasses extraction, manufacturing, construction, maintenance, and disposal. Hence, the replacement of raw materials by residues in a circular economy approach, reduce energy intensity, wastes, and emissions, or a longer service life may with easier recyclability are areas that hold enormous potential as solutions for lowering environmental impacts. Secondly, these construction materials highly influence the operation of buildings and infrastructures. Thus, improvements related to thermal isolation, hygroscopic behavior, or mechanical response, among others, can help engineers to reduce energy consumption, living discomfort, or the size of structures. For these reasons, this Special Issue is aimed to show the most relevant advances related to building and civil engineering materials from the perspective of a more environmentally friendly footprint.

James McGill Professor,  
Professor of Biomedical  
Engineering, Professor of  
Bioengineering, Professor of  
Experimental Surgery,  
Department of Biomedical  
Engineering, Faculty of  
Medicine/Faculty of Dentistry,  
McGill University, Duff Medical  
Science Building, 3775 University  
Street, Montreal, QC H3A 2B4,  
Canada

## Message from the Editor-in-Chief

*Materials* (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

## Author Benefits

**Open Access:**— free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
