Message from the Guest Editor

Grain boundary segregation has a large impact on grain boundary properties. Certain solute atoms can concentrate at the boundaries and drastically change various material properties.

After the introduction of structural units for the description of grain boundary structures in the second half of the last century, interface chemistry has achieved an important development both due to new theoretical models and improved experimental techniques.

The aim of this Special Issue is to demonstrate recent progress including new concepts regarding the grain boundary complexions considered for the transformation of two-dimensional interfacial structures and summarized reliable experimental results that are also essential for material technological applications.

The research in this field covers materials design via grain boundary engineering, the stabilization of nanocrystalline structures, and nonequilibrium phenomena due to irradiation, to mention only a few special cases.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
