Message from the Guest Editors

Dear Colleagues,

Lithium and sodium-ion batteries are current and future high energy density energy storage devices. However, the traditional electrode materials face many challenges and there is a lot of scope in the improvement of the energy capacity of these batteries by working on efficient and better electrode materials. The joint efforts of researchers active in different fields, such as chemistry, physics, electrical engineering, and material sciences, can help in dramatically improving the characteristics and hence achieving high-capacity Li-ion (LIBs) and Na-ion batteries (SIBs).

The topics of interest concerning electrode materials for LIBs and SIBs include but are not limited to:

- Advanced Micro and Nanostructures as Electrode Materials
- MOF-based Electrodes
- MOF-derived Electrode Materials
- Experimental and Theoretical Studies Related to Intercalation and Diffusion Mechanisms
- Attenuation of Volumetric Expansion via Electronic and Morphological Enhancement

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
