Properties and Durability of Advanced Concrete and Novel Construction Composites

Message from the Guest Editor

Dear Colleagues,

The durability of construction products refers to economic and environmental issues as limited life increases constructions' cost. Concrete and construction composites are often used in the construction sector whose development and exploration towards advanced and high-performance products is today very intensive. But finding high-performance, sustainable, and eco-efficient construction materials that can compete traditional concrete and composites available. Except the complete assessment of properties and behavior of these novel products, their durability with respect to their long time performance is of the particular performance. This Special Issue is dedicated to recent research aimed at the durability of building materials and components to contribute to the systematization and dissemination of knowledge related to the long-term performance and durability of construction. The Special Issue will provide collection of new developments in the field of durability of advanced building materials, systems, and components, their characterization, service life prediction methodologies, and maintenance management.

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty comprehensive topics: biomaterials, energy materials, advanced composites, structure analysis and characterization, porous materials, manufacturing processes and systems, advanced nanomaterials, smart materials, thin films and interfaces, catalytic materials and carbon materials, materials chemistry, materials physics, optics and photonics, corrosion and materials degradation, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics, metals and alloys, general. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles. Materials provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q1 (Metallurgy & Metallurgical Engineering) / CiteScore - Q2 (Condensed Matter Physics)
