Low-Cost Water Treatment - New Materials and New Approaches

Guest Editors:

Prof. Dr. Andreas Taubert

Institute of Chemistry, University of Potsdam, Building 25, Rm. B.0.17-17, Karl-Liebknecht-Str. 24-25, D-14476 Golm, Germany

Prof. Dr. Emmanuel Unuabonah

African Centre of Excellence for Water and Environmental Research (ACEWATER), Redeemer's University, PMB 230, Ede, Nigeria

Deadline for manuscript submissions:

closed (15 August 2021)

Message from the Guest Editors

Water is one of the most valuable resources, and in (pre)historic times, wars began over access to reliable water sources. Chemistry, materials science, engineering, and education can significantly contribute to the technical aspects of securing water availability and water quality. The current Special Issue concentrates on material-based approaches for water treatment such as adsorbents, (photo)catalysts, engineered materials with special properties useful for the degradation of hazardous substances, and related topics. A special focus is on low-cost, high-performance materials because the single major reason for many of the severe health issues in the developing countries is not a lack of technologies for water purification but cost.

As long-term collaborators on the subject and as the guest editors of this Special Issue, we invite you to show us your newest research and developments in the field of low-cost materials for water treatment. We encourage everyone to discuss what can be done to alleviate some of the problems we are currently facing and are looking forward to many interesting and exciting contributions.

Special Issue

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Maryam Tabrizian

1. Department of Biomedical Engineering, Faculty of Medicine and Health Sciences, McGill University, Montreal, QC H3A 2B6, Canada

2. Faculty of Dentistry and Oral Health Sciences, McGill University, 3640 Rue University, Montreal, QC H3A 0C7, Canada

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers twenty-five comprehensive topics: biomaterials, energy materials, advanced composites, advanced materials characterization, porous materials, manufacturing processes and systems, advanced nanomaterials and nanotechnology, smart materials, thin films and interfaces, catalytic materials, carbon materials, materials chemistry, materials physics, optics and photonics, corrosion, construction and building materials, materials simulation and design, electronic materials, advanced and functional ceramics and glasses, metals and alloys, soft matter, polymeric materials, quantum materials, mechanics of materials, green materials, general. *Materials* provides a unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Ei Compendex, CaPlus / SciFinder, Inspec, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q2 (*Condensed Matter Physics*)
