University of Rijeka, Rijeka,
Croatia

Deadline for manuscript
submissions:

30 September 2024

Message from the Guest Editor

Pediatric oral health involves concepts, techniques and procedures not only from pediatric and general dentistry or other dental specialties, but also from other medical specialties. Those who care about pediatric oral health are required to treat a wide range of diseases in children, from infancy through adolescence, including persons with special healthcare needs. Children's dentistry is constantly evolving. In recent decades, there have been many advances and innovations in the field that encompass a variety of skills, disciplines, procedures and techniques. Hence, with the changing scope of practice it is imperative that clinicians stay up-to-date with the current evidence-based trends in practice and that they collaborate with other disciplines. For that reason, some areas this Special Issue seeks to address include, but are not limited to: behavioral guidance, caring for patients with medical and developmental disabilities, caries prevention, public health, sedation, pharmacological management and hospital dentistry, including other traditional fields of dentistry.
