Deadline for manuscript submissions:

20 August 2024

Message from the Guest Editors

Dear Colleagues,

How an individual's associated comorbidity can affect their pregnancy has always been an essential concern of medical specialists. The presence of these health conditions, no matter how minor, requires additional evaluation and appropriate treatment to avoid complications. They can worsen throughout the gestation period, influencing maternal health status, the evolution of pregnancy, and the outcome of birth. The perinatologist will evaluate the pathology in collaboration with the specialist to reach the most favorable outcome for the patient and the fetus. The purpose of this Special Issue is to share current management strategies regarding maternal-associated pathology from personal acquired experience and guidelines worldwide. This Special Issue allows specialists worldwide to make public results of state-of-the-art research in prenatal care in cases with comorbidities. This Special Issue collects papers that reflect further progress in this field in the form of original research manuscripts, reviews, and case reports.
