**closed (20 April 2023)**

### Message from the Guest Editors

Dear Colleagues,

Physical activity and exercise programs have a positive impact on functional and physical fitness, body composition, independence, and psychosocial status in the elderly population, which is important for their health. The risk and fear of falling is a major topic of debate, and it is linked to functional fitness and psychological issues. Exercises, training programs, and recommendations for the physical activity must be simple to implement. Aerobic exercises to improve endurance, resistance exercises, and flexibility exercises are typically mentioned in the recommendations. Determining the type of training that will have a positive impact on physical fitness and quality of life is difficult but critical. The purpose of this Special Issue is to present the effects of various interventions on the functional and physical fitness levels, body composition, independence, and health of the elderly. We invite authors to submit articles related to these topics.

## Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

## Author Benefits

**Open Access:**— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), and [other databases](#).

**Journal Rank:** CiteScore - Q2 (*General Medicine*)
