Deadline for manuscript submissions: closed (29 February 2024)

Message from the Guest Editors

Chronic liver diseases represent a major global public health problem, especially when they reach the stage of cirrhosis and portal hypertension, with an estimated 2 million deaths each year. Imaging plays a crucial role in the management of liver diseases, as it allows for early detection, accurate diagnosis, and monitoring of disease progression. It also helps in guiding interventional procedures and assessing treatment effectiveness. Ultrasonography and ultrasound-based methods are in continuous development, with a particular impact in recent years on the evaluation and management of chronic liver diseases, allowing the non-invasive evaluation of liver fibrosis, liver steatosis and, more recently, hepatic inflammation, with an important role in fibrogenesis.

In this Special Issue of Medicina, we aim to collate the current knowledge and apply it to emerging research in the field of imaging techniques in liver diseases, focusing on ultrasound and ultrasound-based methods. We look forward to receiving your contributions.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius Medical Academy, Lithuanian University of Health Sciences, Kaunas, Lithuania

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed,

MEDLINE, PMC, and other databases.

Journal Rank: CiteScore - Q2 (General Medicine)
