Additive Manufacturing of Al- and Mg-Based Light Metal Alloys

Guest Editors:

Prof. Dr. Maurizio Vedani

Department of Mechanical Engineering, Politecnico di Milano, Via Giuseppe La Masa 1, 20156 Milano, Italy

Dr. Riccardo Casati

Department of Mechanical Engineering, Politecnico di Milano, Via Giuseppe La Masa 1, 20156 Milano, Italy

Deadline for manuscript submissions: closed (30 June 2023)

Message from the Guest Editors

Light alloys and related composites are increasingly used in many industrial fields to obtain high-strength and lightweight structural components through additive manufacturing processing routes. The demand for increased performance and energy savings has pushed society towards a wider adoption of light materials, which are implemented through innovative design approaches, such as those based on topological optimization and the use of cellular structures.

This Special Issue of Metals focuses on the development of new light-alloy metals, especially those designed with optimal properties and that are easily processable through additive manufacturing routes such as laser powder bed fusion or directed energy deposition.

While the focus of this Special Issue is aluminium alloys and related composites, other relevant metals and approaches to obtain light structures will be considered.

The papers presented in this Special Issue will provide an overview of recent technological advances and the industrial state of the art for light-metal additive manufacturing from the above described perspectives.

Editors-in-Chief

Prof. Dr. Hugo F. Lopez

Department of Materials Science and Engineering, College of Engineering & Applied Science, University of Wisconsin-Milwaukee, 3200 N. Cramer Street, Milwaukee, WI 53211, USA

Prof. Dr. Yong Zhang

Beijing Advanced Innovation Center of Materials Genome Engineering, State Key Laboratory for Advanced Metals and Materials, University of Science and Technology Beijing, 30 Xueyuan Road, Beijing 100083, China

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure - disciplines in metallurgical field the ranging from processing. mechanical behavior. phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, CAPlus / SciFinder, and other databases. **Journal Rank:** JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q1 (*Metals and Alloys*)
