Researches and Simulations in Steel Rolling

Guest Editor:

Prof. Dr. Adam Grajcar

Department of Engineering
Materials and Biomaterials,
Faculty of Mechanical
Engineering, Silesian University
of Technology, 44-100 Gliwice,
Poland

Deadline for manuscript
submissions:

closed (30 March 2020)

Message from the Guest Editor

Dear Colleagues,

This Special Issue will cover recent progress and new developments in researches and simulations in steel rolling including its all metallurgical and technological aspects. Researches and simulations on microstructure-property relationships of hot-rolled, thermomechanically processed and cold-rolled steels, as well as selected technological aspects of modern rolling mills for flat and long products and researches on gauge, profile, flatness, and surface quality inspection are covered.

Assoc. Prof. Dr. Adam Grajcar

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **SCIE (Web of Science)**, **Inspec**, **CAPLUS / SciFinder**, and **other databases**.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q1 (*Metals and Alloys*)
