

Modeling and Simulation of Metallurgical Processes in Ironmaking and Steelmaking

Guest Editors:

Dr. Thomas Echterhof

Department for Industrial
Furnaces and Heat Engineering,
RWTH Aachen University,
Kopernikustr. 10, 52074 Aachen,
Germany

Prof. Dr. Ko-Ichiro Ohno

Department of Materials Science
and Engineering, Faculty of
Engineering, Kyushu University,
744 Motooka, Nishiku, Fukuoka
819-0395, Japan

Dr. Ville-Valtteri Visuri

Process Metallurgy Research
Unit, University of Oulu, P.O. Box
4300, 90014 Oulu, Finland

Deadline for manuscript
submissions:

closed (31 March 2022)

Message from the Guest Editors

The UN's 2030 Sustainable Development Goals, the Paris Agreement, and the European Green Deal, among other goals, all aim to improve the sustainability of industrial production and to reduce CO₂ emissions. This goal cannot be achieved without the ironmaking and steelmaking industries.

To reach this goal, further process optimizations with regard to energy and resource efficiency, as well as the development of new processes or process routes, are needed.

Modeling and simulation have thus established themselves as an invaluable source of information regarding otherwise unknown process parameters, and as an alternative to plant trials with a lower associated cost, risk, and duration. Models are also applicable for model-based control of metallurgical processes.

In this Special Issue "Modeling and Simulation of Metallurgical Processes in Ironmaking and Steelmaking", we aim to collect regular and review articles to showcase the recent advances in the modeling and simulation of unit processes in ironmaking and steelmaking. We also encourage studies that examine the integration of process models to simulate process chains.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **SCIE (Web of Science)**, **Inspec**, **CAPLUS / SciFinder**, and **other databases**.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q1 (*Metals and Alloys*)
