Computational Simulation and Numerical Modeling of Metal Refining and Casting Process

Guest Editor:

Dr. Jae Hong Shin

Korea Institute of Industrial
Technology, Incheon 21655,
Republic of Korea

Deadline for manuscript
submissions:

closed (31 March 2023)

Message from the Guest Editor

During the refining and casting process of metals, it occurred that complex and varied physical and chemical phenomena such as fluid flow, electromagnetic, heat transfer, mass transfer, and thermodynamic reactions.

To understand these physicochemical phenomena of metal refining and casting processes, it is very important that the prediction of physicochemical phenomena during the refining and casting process using computational simulation and numerical modeling.

Message from the Editorial Board

Metallic materials play a vital role in the economic life of modern societies; contributions are sought on fresh developments that enhance our understanding of the fundamental aspects related to the relationships between processing, properties and microstructure – disciplines in the metallurgical field ranging from processing, mechanical behavior, phase transitions and microstructural evolution, nanostructures, as well as unique metallic properties – inspire general and scholarly interest among the scientific community.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **SCIE (Web of Science)**, **Inspec**, **CAPLUS / SciFinder**, and **other databases**.

Journal Rank: JCR - Q2 (*Metallurgy & Metallurgical Engineering*) / CiteScore - Q1 (*Metals and Alloys*)
