Bulgaria

Deadline for manuscript
submissions:

15 October 2024

Message from the Guest Editor

Dear Colleagues,

We are pleased to invite you to share your research on clinical viral infections and autoimmunity. Viral infections can induce autoimmune pathologies. Protective effects during viral infection can be achieved via regulatory immune responses, which suppress autoimmune phenomena. The available data indicate that viral-induced autoimmunity can be activated through multiple mechanisms. Additionally, SARS-CoV-2 is lined up next to the other viruses with the potential to trigger autoimmunity, such as EBV, CMV, etc.

In this Special Issue, original research articles, reviews, and case reports are welcome. Research areas may include (but are not limited to) the following:

- Immune mechanisms against viral infection;
- Viral infections;
- Immunopathogenesis;
- Autoreactive immune cells;
- Molecular mechanisms;
- Mechanisms of autoimmunity;
- Autoimmune diseases;
- Anti-nuclear antibodies;
- Vaccines against viruses.

We look forward to receiving your contributions.

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology (medical)*)
