Faculty of Sciences, University of
Granada, 18071 Granada, Spain

Deadline for manuscript
submissions:

30 April 2024

Message from the Guest Editors

Microorganisms are proposed as an eco-friendly solution for the remediation of hazardous waste environments. Many advances have been performed to elucidate these mechanisms. Nevertheless, there is still an urgent requirement to explore concepts for practicable technologies that can be applied to these ends.

It is necessary to expand and intensify studies about microbe–hazardous waste interactions, for example, how they may control radionuclide mobility, and how they can be applied to bioremediate hazardous pollutants.

This Special Issue thus welcomes research on all these challenges. We look forward to your valuable contributions.

an Open Access Journal by MDPI

Systems Biology, UFZ-Helmholtz
Centre for Environmental
Research, 04318 Leipzig,
Germany

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology (medical)*)
