Microbiota: From the Environment to Humans

Guest Editors:

Dr. Elisa Bona

Dipartimento per lo Sviluppo Sostenibile e la Transizione Ecologica, Università del Piemonte Orientale, 13100 Vercelli, Italy

Prof. Dr. Sergio Uzzau

Dipartimento di Scienze Biomediche, Università degli Studi di Sassari, Viale San Pietro, 07100 Sassari, Italy

Dr. Elisa Gamalero

Department of Sciences and Technological Innovation, University of Piemonte Orientale, viale T. Michel, 11-15121 Alessandria, Italy

Deadline for manuscript submissions:

closed (30 April 2022)

Message from the Guest Editors

Microbiomes are the genomes associated to these microbial communities, and the metaproteome is the whole proteome expressed by these genomes. Thanks to the "omic" technologies, it is now possible to investigate both the genetic traits and the biological functions expressed by these complex microbial systems. Although the relationship between the host's characteristics and its associated microbial communities has been extensively studied, the effects of one on the other are largely unknown.

The aim of this Special Issue is to provide an overview of the significance of microbial community fluxes from natural and built environments to humans, microbial community fluxes across foods, the effects of microbiota on host biology, and the integrated functions operating inside the holobiont

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC,

PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Microbiology) / CiteScore - Q2 (Microbiology (medical))
