Deadline for manuscript
submissions:

closed (31 May 2022)

Message from the Guest Editors

Brucellosis remains a formidable challenge, recognized by the WHO as one of the most significant zoonotic diseases globally, and still endemic in large parts of the world. Despite the pathogen gaining more attention in recent years, with significant increases in publication profiles and increasing data from countries with endemic disease, it still fulfils the oft-used mantra as a ‘neglected’ disease.

In this Special Issue, we aim to both summarize current knowledge and explore emerging themes and developments in our understanding of the pathogen, the disease, and their global impact. We thus invite submission of research and review articles that cover any aspect of the bacteriology, epidemiology, molecular biology, genomics, or pathogenesis of *Brucella* species or vaccine development or diagnostics for Brucellosis. We look forward to your contribution.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology (medical)*)
