Message from the Guest Editors

Dear Colleagues,

This Special Issue is the continuation of our previous edition "Updates on HBV Infection" in *Microorganisms*.

Achieving the WHO diagnostic objectives by 2030 of treating 90% of people with chronic hepatitis B and treating 90% of eligible people to prevent the development of hepatocellular cancer will require a substantial scale-up of tests and treatments.

In this context, this Special Issue aims to decipher the barriers in terms of the prevention, the diagnosis, and access to treatment of patients with viral hepatitis; propose new biomarkers; and explore viral variability in order to help expand access to anti-viral treatments for HBV chronic carriers.

Dr. Isabelle Chemin

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology (medical)*)
