Petroleum Resources and
Prospecting, China University of
Petroleum, Beijing 102249, China

Deadline for manuscript
submissions:

closed (30 April 2024)

Message from the Guest Editors

Dear Colleagues,

Fine-grained sedimentary rocks are defined as sedimentary rocks where at least 50% of the grains are smaller than 62.5 μm . Fine-grained sedimentary rocks are particularly valuable because they contain most of the energy reserves and mineral resources that are vital to our modern society. Moreover, these rocks comprise approximately two-thirds of the stratigraphic record and have significant implications for global paleoclimate and paleoceanography reconstruction. Despite global economic and scientific significance, geologists still lack a fundamental understanding of the sediment transportation processes, deposition mechanisms, petrographic characteristics and geochemical signatures of these rocks. This Special Issue aims to contribute to the disclosure of all the recent research findings and applications of new techniques in the petrography, sedimentology and geochemical signatures of fine-grained sedimentary rocks

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
