Deadline for manuscript
submissions:

closed (29 February 2024)

Message from the Guest Editor

Dear Colleagues,

Minerals are the most abundant resource, and are also the largest waste flows generated by mankind, if we include mining waste. They represent both a major potential and challenge for circular economy strategies. The valorisation of mineral waste as secondary minerals useful for the economy allows to reduce primary extraction needs and waste disposal impacts and costs. Research on waste mineralogy, chemistry and characterisation, mineral processing, decontamination, handling, environmental impacts (including GHG emissions, water resources, and land use) and secondary applications of minerals is of key importance for creating a more sustainable planet.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
