Mineralogical, Geochemical, and Isotope for Igneous Intrusions and Metamorphic Rocks of Siberian Craton

Guest Editor:

Prof. Valery A. Vernikovsky

 Novosibirsk State University, Pirogova St., 1, 630090
Novosibirsk, Russia
Institute of Petroleum Geology and Geophysics, Koptyug Ave., 3, 630090 Novosibirsk, Russia

Deadline for manuscript submissions: closed (15 June 2020)

Message from the Guest Editor

Dear Colleagues,

The Siberian Craton is one of the main structures of North Asia and the Eurasian Plate. The formation of its basement. has a long history in the Archean and Paleoproterozoic. During the Mesoproterozoic, most of the Siberian Craton, with the exception of the Aldan and Anabar shields, was overlapped by marine sediments, and tectonic activity at the margins began in the late Neoproterozoic and continued in the Paleozoic and Mesozoic with the formation of accretion and collision orogens. This Special Issue will cover a broad range of topics related to the problem of the formation of magmatic and metamorphic complexes of the Siberian Craton at different stages of its evolution. For this Special Issue, we invite researchers to present new petrological, mineralogical and geochemical data related to the formation of the basement of the Siberian **C**raton and the orogenic belts at its margins.

Message from the Editor-in-Chief

Minerals welcomes submissions that report basic and applied research in mineralogy. Research areas of traditional interest are mineral deposits, mining, mineral processing and environmental mineralogy. The journal footprint also includes novel uses of elemental and isotopic analyses of minerals for petrology, geochronology and thermochronology, thermobarometry, ore genesis and sedimentary provenance. Contributions are encouraged in emerging research areas such as applications of quantitative mineralogy to the oil and gas, manufacturing, forensic science, climate change, geohazard and health sectors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), GeoRef, CaPlus / SciFinder, Inspec, Astrophysics Data System, AGRIS, and other databases. **Journal Rank:** JCR - Q2 (*Mining & Mineral Processing*) / CiteScore - Q2 (*Geology*)
