

Last Advances in Cosmetics and Personal Care Products Analysis

Guest Editors:

Dr. Maria Celeiro

Department of Analytical Chemistry, Nutrition and Bromatology, University of Santiago de Compostela, Spain

Prof. Dr. Maria Llompарт

CRETUS Institute, Department of Analytical Chemistry, Nutrition and Food Science, Universidade de Santiago de Compostela, E-15782 Santiago de Compostela, Spain

Deadline for manuscript submissions:

closed (30 June 2022)

Message from the Guest Editors

The use of cosmetics and personal care products is increasing worldwide. They are complex matrices formed by a broad range of chemical compounds including classical ingredients such as fragrances, preservatives, UV filters or dyes, among others. However, in recent years, the trend has been moving toward including other additives such as bioactive molecules or compounds with nutraceutical properties. Their matrix complexity, together with the wide range of cosmetics and personal care products currently marketed, imply a challenge for their analysis, with most of them requiring a sample pre-treatment step before analysis.

I cordially invite authors to contribute original articles or reviews that will give the readers of *Molecules* updated information about the recent advances in cosmetics and personal care products analysis. Such contributions may include new sample preparation strategies based on microextraction and green miniaturized techniques to determine a broad spectrum of compounds in cosmetic and personal care products, as well as the identification and characterization of bioactive compounds from natural plant extracts that could be employed as value-added ingredients.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous)*)
