Message from the Guest Editor

Dear Colleagues,

Hyaluronan (HA) is a natural glycosaminoglycan present in all vertebrates in many tissues. HA has various biological functions, which depend on its molar mass. HA has antioxidant properties; however, it can be readily degraded by reactive oxygen species. For many years, it has been used in treatment of osteoarthritis, ophthalmology, and in cosmetics. In recent years there has been a growing interest in HA to be applied also in other fields of medicine such as dentistry, skin wound healing, gene delivery, and tissue engineering.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (*Chemistry (miscellaneous)*)
