### Message from the Guest Editor

This Special Issue of *Molecules* titled “Drugs Modulating Ca<sup>2+</sup> Signaling” is devoted to several research topics related to the search for new chemical entities able to modify the cell Ca<sup>2+</sup> signal. Topics of interest include (i) computational design, (ii) synthesis, (iii) natural products, (iv) pharmacological screening, (v) structure-activity relationships, (vi) electrophysiology with new Ca<sup>2+</sup> modulators, (vii) chemical biology, and in general other topics related to the search for new cell Ca<sup>2+</sup> modulators.

## Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.
