Message from the Guest Editor

Migraine and headache are highly prevalent common diseases; however, the pathogenesis of these primary headache disorders has not been completely revealed. Recent advances and clinical applications of CGRP-blocking therapies have provided great advances for both basic and clinical research of headaches.

We are pleased to invite you to contribute to this Special Issue. This Special Issue aims to collect cutting-edge findings on migraine. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following: molecular pathophysiology, imaging, medical therapy, neuromodulation, animal studies, and clinical studies.

- migraine
- headache
- molecular marker
- imaging
- pathology
- CGRP
- medical treatment
- neuromodulation
