Message from the Guest Editor

Dear Colleagues,

Although COVID-19 is primarily a disease of the respiratory system, systematic inflammatory and immune response have also been emerging due to COVID-19; this indicates its manifestations are diverse and affect multiple systems, including the nervous system.

This Special Issue aims to contribute to filling knowledge gaps on the COVID-19. We are inviting research papers such as case reports, observational studies, RCTs, reviews including narrative reviews and meta-analytical reviews focused novel insights on clinical features, treatments, epidemiology, therapeutics, and inflammatory biomarkers (e.g., laboratory, neuroimaging, neurophysiology).
