Message from the Guest Editors

Dear Colleagues,

Since oral health is closely linked to nutritional status, which determines general health, poor oral health in the elderly population has been of global concern in recent decades. “Oral Health and Nutrition in Older Adults” is a Special Issue that covers nutrition-related and oral health issues in the elderly population. We encourage scientists to submit experimental and theoretical results that shed light on the personal, familial, and/or environmental factors of nutrition and/or oral health in the elderly; associations between nutritional concerns and oral health in the elderly; and strategies to improve nutritional and oral health status in the elderly in order to optimize their quality of life and promote healthy aging. We welcome reviews and original articles related to the development of new technologies, policies, and strategies and their applications, to highlight the interrelations between oral health and nutrition in the elderly population. The dissemination of knowledge through various modes of promotion, as well as preventive strategies for oral health and nutrition, can improve healthcare practice in this specific population.
