Message from the Guest Editors

Obesity is a major public health issue, and although its prevalence is stabilizing in many countries, in some studies uneven data have been observed and increasing trends still continue to be reported.

This Special Issue of *Nutrients* encourages the submission of original qualitative, quantitative, and mixed-methods studies based on interventions, programs, practices, and policies aimed to prevent overweight and obesity, particularly those considering community-based strategies and life-cycle approaches. Submissions that target population- and community-level approaches to prevent or manage obesity via considerations of food access and exposure, through observational studies, interventional studies, review articles, and commentaries, are all welcome.
